History of American Capitalism

This course will examine the major trajectories of the development of American capitalism. Focusing on the reasons for and effects of capitalist growth, students will gain an understanding of how North America turned from a relatively minor outpost of the Atlantic economy to the powerhouse of the world economy, and how this in turn shaped the ways Americans produced and lived. Topics range from the structure of Native-American economies to the economic consequences of the Civil War; from the impact of capitalism on gender relations to the changing structures of American businesses; and from the position of the United States economy in the world economy to the role of the government in channeling economic development. The course will put particular emphasis on the global context of American economic development and situate it deeply in the political and social developments of the age.
